

SETTING UP SKIN HEALTH SURVEILLANCE COURSE

SETTING UP SKIN HEALTH SURVEILLANCE COURSE

Skin health surveillance is an essential element in most occupational skin management systems. It aims to detect skin problems at the earliest point so early action can be taken, such as:

- 🎯 Identifying causative exposures and improved exposure management
- 🎯 Advice and treatment to allow continuation at work
- 🎯 Ensure others remain unaffected
- 🎯 Advice and guidance to ensure high standards maintained

Many workplaces are required to have a skin health surveillance system. This is the case if a worker in your workplace has had an occupational exposure related skin problem, PPE is being used, or if the industry is known to have the potential for workers to develop work related skin issues. This training course aims to provide participants with the skills to develop and implement an effective skin health surveillance system.

BENEFITS

- 🎯 Build the knowledge needed to implement an effective skin health surveillance system
- 🎯 Ensure a more robust and effective skin health surveillance system
- 🎯 Learn or improve skills for skin health surveillance
- 🎯 Access to additional resources

COURSE CONTENT

- 🎯 Basics of skin anatomy and physiology
- 🎯 Overview of skin disease relevant to the workplace

- 🎯 Overview of techniques for skin health surveillance
- 🎯 The role of the competent person
- 🎯 Developing a questionnaire
- 🎯 Visual assessment: simple skin checks
- 🎯 Visual assessment: scoring systems
- 🎯 Worked examples of visual assessment
- 🎯 Visual assessment: practical exercise
- 🎯 Skin condition measurement (available techniques; what to use and when)
- 🎯 Practical exercise using skin hydration measurements
- 🎯 Designing your skin health surveillance system
